

PROBLEM STATEMENT:

Using the list container from the STL, write a program that will read the information from a file into a list and then display the list to the screen. Add your name. Sort the list by id. Print the list again

CODE:

Use the provided disneyin2.txt file.
Use the struct below

```
struct student
{
    char    firstnm[20],
           lastnm[20];
    int     id,
           grade;
};
```

The driver is to demonstrate that the above mentioned operations are performed

DELIVERABLES:

The lab5_client_driver.cpp, with the output from console window pasted at the end of the driver source code

Due Date :10 october 2014
